WHO WE ARE

50 YEARS OF FONDAZIONE MENARINI

The **"Fondazione Menarini"**was established in the spring of **1976** to promote research and knowledge in the fields of biology, pharmacology and medicine as well as economy and human sciences.
One of the main tools the Foundation uses to achieve its goals is the organization of **international congresses** with a specific focus on medical disciplines.

FONDAZIONE MENARINI

The logo the **Fondazione Menarini** adopted at the time of its establishment derives from a famous seventeenth-century treatise, the **Novissima Iconologia del Ripa** (Ripas' New Iconology), rich in symbolic meanings from Parmenides to Plato's Myth of the Soul.
The image, which depicts a man leading a horse while firmly gripping the bridle, was chosen as it effectively represents the Foundation's goals and topics based on its **balanced interests in humanistic and biological sciences.**

FONDAZIONE MENARINI

RATIONALE

Breast cancer continues to represent a major global health challenge, characterized by biological heterogeneity and rapidly evolving therapeutic strategies. Significant advances in screening, diagnostics, loco-regional interventions, and systemic therapies have improved patient outcomes, yet they have also increased the complexity of clinical decision-making. As a result, there is a growing need for continuous, high-level education that integrates multidisciplinary perspectives and translates innovation into clinical practice. This scientific event, featuring a world-leading expert in breast cancer, is designed to provide participants with comprehensive and up-to-date insights across the full continuum of care. By convening specialists from oncology from all over the world this event promotes interdisciplinary dialogue and collaboration—an essential component in optimizing patient outcomes.

The program is specifically structured to achieve the following learning objectives:

- To enable interdisciplinary discussion and collaboration in the care of patients with breast cancer
- To enhance understanding of subtype-specific breast cancer management, reflecting the increasing importance of personalized medicine
- To improve knowledge of current radiological and pathological diagnostic approaches, which are critical for accurate staging and treatment planning
- To review current developments in loco-regional treatments, including surgical and radiation strategies
- To examine the latest advances in neoadjuvant and adjuvant systemic therapies
- To provide insight into complementary approaches, lifestyle interventions, and supportive care as integral components of patient management
- To evaluate contemporary strategies for the management of advanced breast cancer
- To address the specific clinical and psychosocial needs of young patients with breast cancer

Through expert-led lectures and interactive exchanges, participants will be encouraged to integrate emerging evidence into their clinical practice. The inclusion of a globally recognized authority ensures not only the scientific rigor of the content but also critical interpretation of evolving data and future directions in the field.
