WHO WE ARE

50 YEARS OF FONDAZIONE MENARINI

The **"Fondazione Menarini"** was established in the spring of **1976** to promote research and knowledge in the fields of biology, pharmacology and medicine as well as economy and human sciences.
One of the main tools the Foundation uses to achieve its goals is the organization of **international congresses** with a specific focus on medical disciplines.

FONDAZIONE MENARINI

The logo the **Fondazione Menarini** adopted at the time of its establishment derives from a famous seventeenth-century treatise, the **Novissima Iconologia del Ripa** (Ripas' New Iconology), rich in symbolic meanings from Parmenides to Plato's Myth of the Soul.
The image, which depicts a man leading a horse while firmly gripping the bridle, was chosen as it effectively represents the Foundation's goals and topics based on its **balanced interests in humanistic and biological sciences.**

FONDAZIONE MENARINI

INTRODUCTION

This consensus project, scheduled for Friday-Saturday 9-10 October 2026, is conceived as a high-level scientific educational event dedicated to multidisciplinary updates on the most recent innovations in the treatment of major high-incidence solid tumours: head and neck, prostate, kidney and breast cancer.

The evolution of modern oncology is characterised by an increasing integration between innovative systemic therapies (immunotherapy, targeted therapies, antibody-drug conjugates, PARP inhibitors) and precision radiation therapy, with a significant impact on clinical outcomes, patients' quality of life, and the sustainability of care pathways. In this context, it is essential for healthcare professionals to acquire up-to-date knowledge not only on individual therapeutic strategies, but above all on their rational and sequential integration.

The scientific programme is structured around keynote lectures delivered by internationally recognised experts, addressing:

- the role of the tumour micro-environment and the biological mechanisms underlying response and resistance to therapies;
- the transformative impact of immunotherapy in head and neck tumours and breast cancer;
- the evolution of systemic strategies in genitourinary tumours, with particular attention to metastatic disease;
- technological and clinical advances in radiation therapy, and how to translate technical innovation into tangible clinical benefit;
- new perspectives in clinical trial design and therapeutic sequencing, particularly in advanced breast cancer;
- the growing role of patient engagement and advocacy in oncological care pathways.

The event addresses concrete and current educational needs of healthcare professionals, promoting:

- evidence-based updates on emerging therapeutic options;
- multidisciplinary discussion among medical oncologists, radiation oncologists, surgeons and other specialists;
- enhanced decision-making skills in daily clinical practice, aligned with the most recent scientific evidence and international guidelines.

In light of the increasing complexity of oncological treatments and the **rapid evolution of knowledge, the congress represents an essential educational opportunity to ensure clinical appropriateness, treatment safety and continuous improvement in the quality of care.**
