WHO WE ARE

50
YEARS OF
FONDAZIONE
MENARINI

The “**Fondazione Menarini**” was established in the spring of **1976** to promote research and knowledge in the fields of biology, pharmacology and medicine as well as economy and human sciences.

One of the main tools the Foundation uses to achieve its goals is the organization of **international congresses** with a specific focus on medical disciplines.

FONDAZIONE
MENARINI

The logo the **Fondazione Menarini** adopted at the time of its establishment derives from a famous seventeenth-century treatise, the **Novissima Iconologia del Ripa** (Ripas’ New Iconology), rich in symbolic meanings from Parmenides to Plato’s Myth of the Soul.

The image, which depicts a man leading a horse while firmly gripping the bridle, was chosen as it effectively represents the Foundation’s goals and topics based on its **balanced interests in humanistic and biological sciences**.

INTRODUCTION

Prevention throughout the cardiovascular continuum demands a life-course strategy that addresses risk factors, organs and clinical syndromes as a single, connected pathway—from obesity, diabetes and dyslipidaemia to vascular inflammation, hypertension, angina, heart failure and cardiorenal disease. This Menarini Foundation course brings together an international faculty to review state-of-the-art science and practical therapies at every step of that pathway, including GLP-1 receptor agonists and SGLT2 inhibitors, advanced lipid-lowering strategies for LDL-C, Lp(a) and triglyceride-rich lipoproteins, as well as PCSK9-targeted and other emerging oral agents, and novel anti-inflammatory approaches to atherosclerosis. Through focused sessions on obesity/diabetes, lipids, inflammation, hypertension, angina, heart failure and the cardiorenal axis, the programme will address the management of high-risk phenotypes commonly seen in practice—such as patients with combined CAD, HF, CKD, obesity or diabetes—and provide case-based guidance on how to sequence and combine therapies to reduce residual risk. Finally, participants will explore how emerging tools in personalised medicine, including AI-enabled decision support, coronary CT imaging, contemporary clinical risk scores (e.g. SCORE2 and SMART2) and polygenic risk scores, can refine cardiovascular risk prediction, support shared decision-making and help deliver truly individualised prevention strategies in everyday clinical care.
